

Eugene EmComm Form 213

Background

This is the modification to the FEMA ICS Form (Version 43) that is installed in the WinLink RMS Express application. It adds two fields: 1) Priority, and 2) MSG#.

Installation {NOTE: These have changed}

Note: **<CALLSIGN>** refers to your Ham Radio Callsign

Look inside **C:\RMS Express\<CALLSIGN>\Templates**
If there is a folder named **EUG**, delete all files inside that folder.
If not, create a folder named **EUG**.

Drag the three other files to that folder (Not this ReadMe)

Resulting in three files

C:\RMS Express\<CALLSIGN>\Templates\EUG\EUG_213.txt

C:\RMS Express\<CALLSIGN>\Templates\EUG\EUG_213_Initial.html

C:\RMS Express\<CALLSIGN>\Templates\EUG\EUG_213_Viewer.html

**** For information on installing these forms in RadioMail, contact KK7GAB@arrl.net****

Usage

Everything works the same as the standard ICS 213 form. You can **Save** and **Load** information.

When you run the application and chose "**Select Template**", you will see a new selection named **<CALLSIGN>**. Expand that and also the **EUG**. Select **EUG_213.txt**.

Developer Note: *{This section to be removed in final version}*

I've noticed that Saving under 1 version and the loading under another version can cause. Issues. Anytime you update these forms, make sure to start fresh.

BUG FIXES

VB1.2

3/20/24

1. Enlarged several fields
2. Added priority to the email title

VB1.1

2/28/24 – Fixed an issue that the forms wouldn't import to RadioMail.
